

## Prevention by optimal nutrition

For steadily growing turf, it is essential to achieve the right balance between soil, air and moisture, microbial activity and healthy soil nutrition. In this way, the turf grows stronger and its natural defence mechanisms are stimulated.

### Solutions to reduce stressful circumstances for turf

The Melgreen Liquid Range focuses on prevention by optimal nutrition through the leaf, with healthy turf as the main target. Melgreen Liquid products have been intensively tested by the STRI and DOC independent research institutes to show their long-lasting effectiveness. With the Melgreen Liquid Range, containing Melgreen<sup>Mn</sup>, Melgreen<sup>Si</sup> and Melgreen<sup>Cu</sup>, Melspring offers solutions to reduce stressful circumstances that much that pesticide use can be limited to the bare minimum, using Melspring's programme.

### Limiting pesticide use

The economic Melgreen range comprises a complete suite of synergetic products that can be used in different seasons. Melgreen<sup>Mn</sup> favours better nutrient uptake due to extra root hair development. Melgreen<sup>Mn</sup> ensures a strong plant sap stream that vitalises the turf and stimulates germination of the grass seed. The highly efficient micronutrient mixture of Melgreen<sup>Si</sup> stimulates the plants' quick response to stress. When Melgreen<sup>Si</sup> is applied frequently, it builds up a strong protective layer around the outer cell walls of the leaf. Melgreen<sup>Si</sup> contains highly soluble silicon form for optimum efficacy. Melgreen<sup>Cu</sup> enhances the resistance of the plant, improves the leaf structure and ensures a more concentrated tissue of the leaves with a higher dry matter content. This results in tissue hardening and growth reduction. All achieved with a very low copper application per hectare.

## Melgreen liquid range

Melgreen Liquid Range prevention programme reduces disease and stress for the plant, while providing greener and healthier grass and better playability for grounds.
